

FCA
CONTINUOUS EDUCATION

USABILITY TEST REPORT

SCOPE OF THE PROTOTYPE

The prototype supports the main administrative workflow for FCA Continuous Education, including event creation, editing, archiving, cancellation, enrollment management, and payment validation.

FEATURES

EVENT LIFECYCLE MANAGEMENT

- Creation, modification, archival and cancellation of events

CATEGORY FOR EVENT MANAGEMENT

- Standardization of event types (e.g., "Diplomado", "Taller").

ENROLLMENT & PAYMENT OPERATIONS

- Reviewing and approving/rejecting enrollment requests and payments.

USABILITY ATTRIBUTES USED AND EVALUATED IN OUR SOFTWARE

APPROPRIATENESS RECOGNIZABILITY

Whether users could quickly understand statuses, actions, and information.

USER ERROR PROTECTION

Whether the system helped users avoid or correct mistakes.

ISO 25010

OPERABILITY

Degree to which a product or system has attributes that make it easy to operate and control.

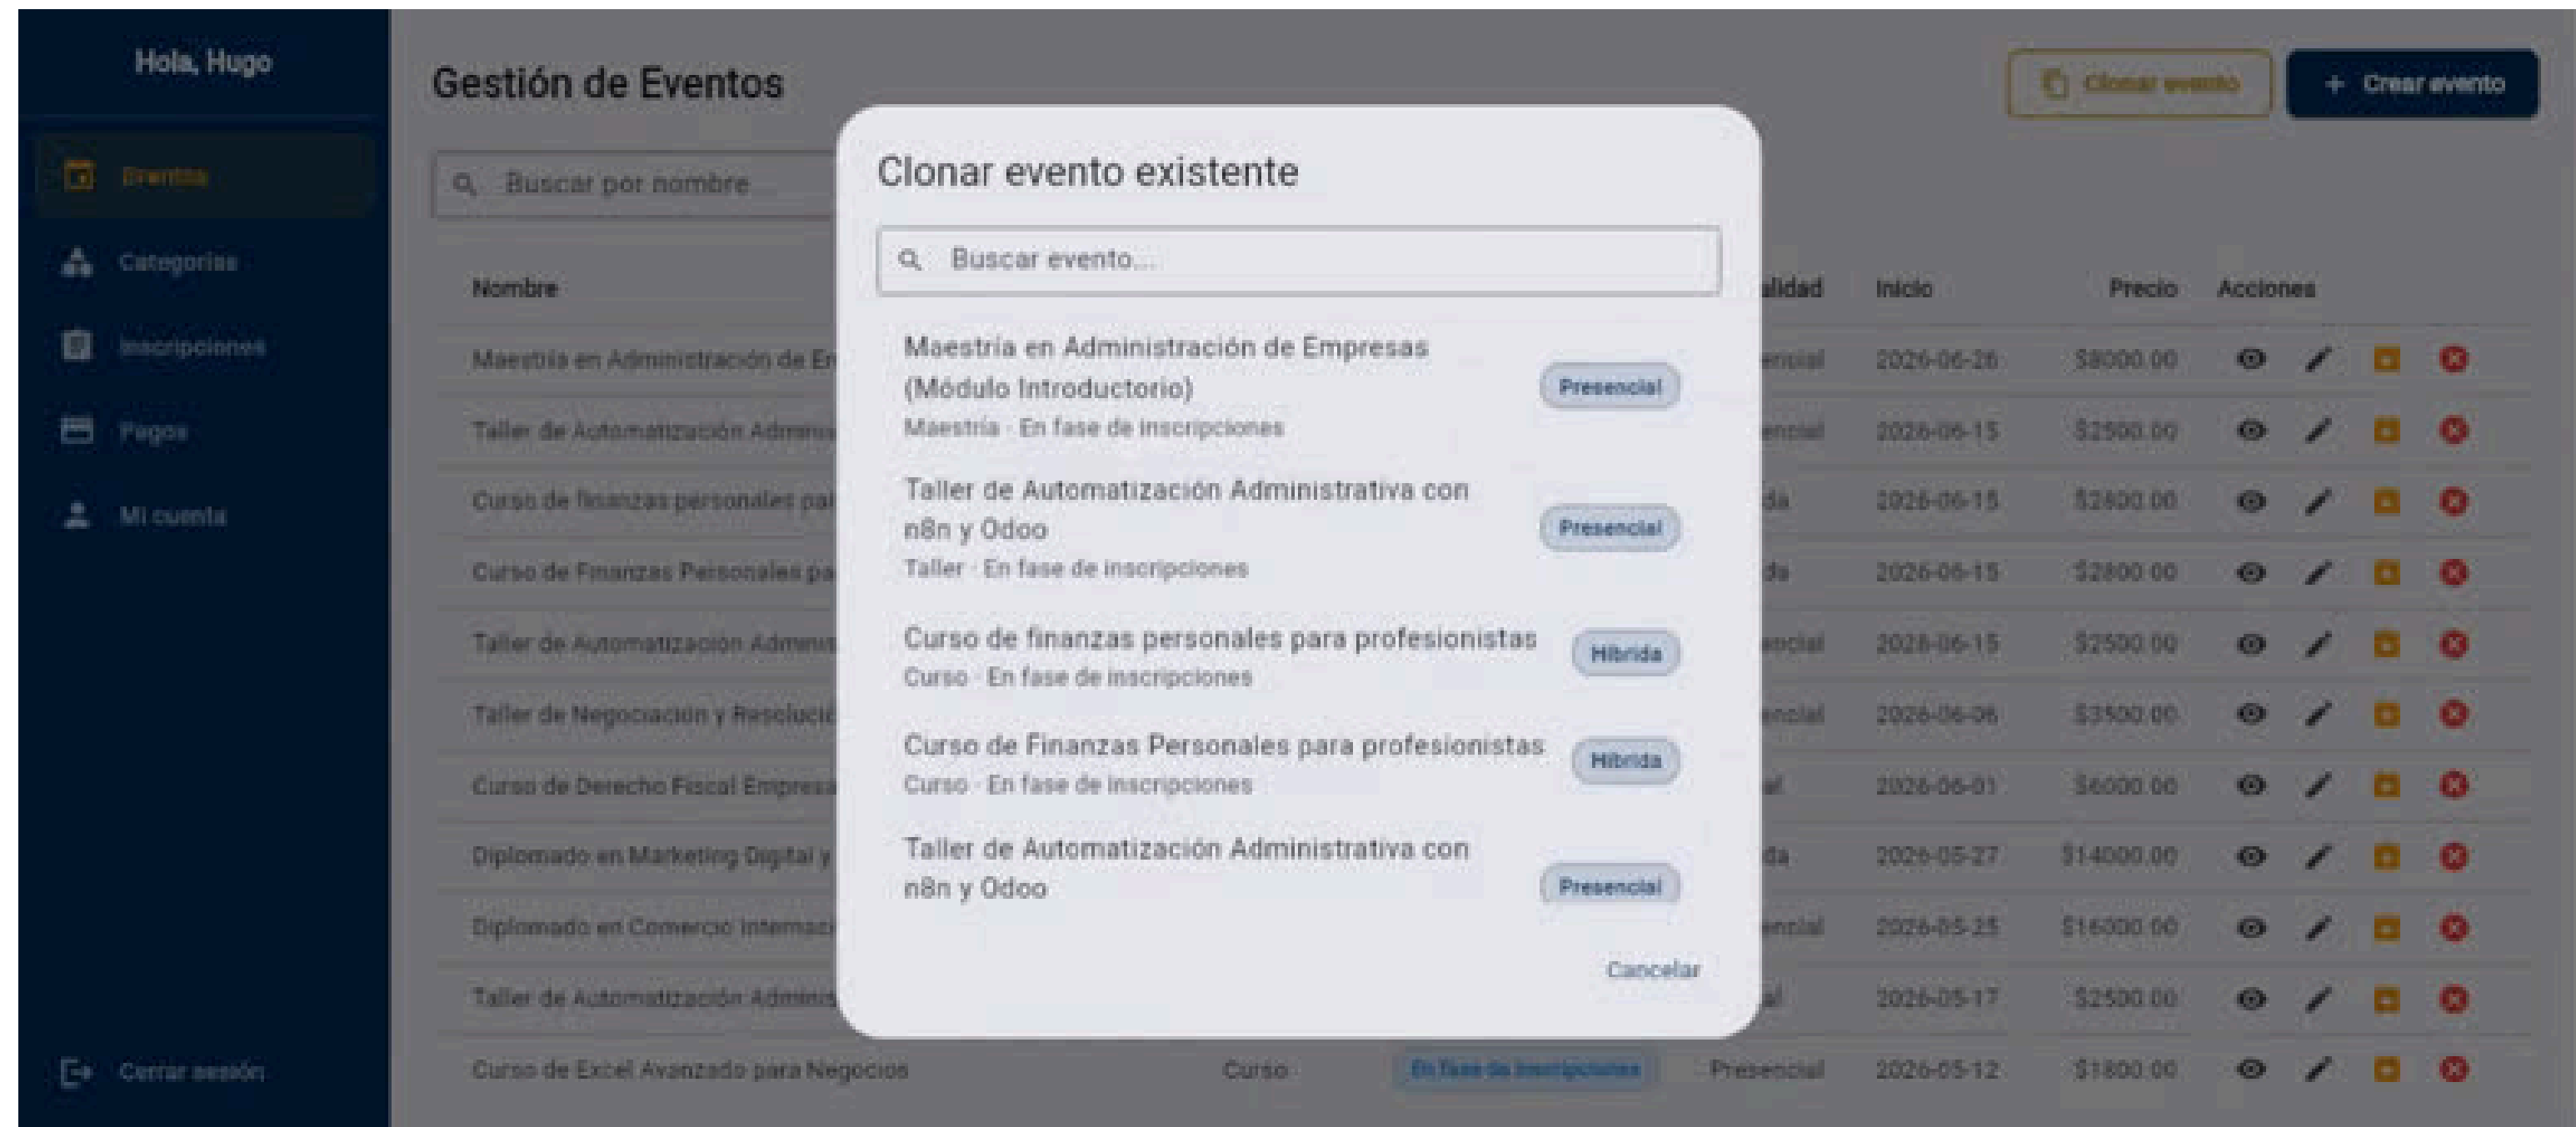

ACCESSIBILITY

Whether users could view and use the interface comfortably.

USABILITY REQUIREMENTS IN THE PROTOTYPE

OPERABILITY: NFR-1 CLONE EFFICIENCY

Most fields are filled automatically when cloning an event to minimize data entry effort.

USABILITY REQUIREMENTS IN THE PROTOTYPE

ACCESSIBILITY : NFR-2 COMPACT VIEW

At least 10 fields visible on a 1920x1080 resolution without vertical scrolling.

The image shows a web application interface for creating an event. A red arrow on the left indicates a height of 1080, and a red arrow at the bottom indicates a width of 1920. The interface is divided into a dark blue sidebar on the left and a light blue main content area on the right.

Sidebar (Left):

- Greeting: Hola, Hugo
- Menu items: Eventos (highlighted), Categorías, Inscripciones, Pagos, MI cuenta
- Logout button: Cerrar sesión

Main Content Area (Right):

Crear evento

Form fields and controls:

- Nombre del evento (text input)
- Categoría (dropdown menu)
- Descripción (text area)
- Fecha de inicio (date picker) / Fecha de fin (date picker)
- Duración (hrs) (text input)
- Horario semanal (info icon) + Agregar horario
- Modalidad (dropdown menu: Presencial) / Aula / Ubicación (text input)
- Capacidad máxima (text input) / Mínimo inscripcio... (text input) / Precio (\$) (text input)
- ☐ Puntos EPC / ☐ Por contrato
- Requisitos de acreditación (text area)
- Profesores (info icon) + Agregar profesor

USABILITY REQUIREMENTS IN THE PROTOTYPE

RECOGNIZABILITY : NFR-3 STATUS RECOGNITION

Statuses use color and high contrast.

USABILITY REQUIREMENTS IN THE PROTOTYPE

ERROR PROTECTION:
NFR-5 CLEAR ERROR MESSAGES

Errors use friendly language, not technical codes.

ERROR PROTECTION:
NFR-6 REAL-TIME VALIDATION

The system gives feedback while users fill out fields.

USABILITY REQUIREMENTS IN THE PROTOTYPE

OPERABILITY: NFR-7 OPERABILITY

The screens use the same buttons, icons and patterns.

PAYMENTS MANAGEMENT SCREEN

TESTING METHODOLOGY

Moderated Think-Aloud Test

- Participants narrate their thinking while completing tasks
- Facilitator observes silently, intervenes only after 3 min blocked
- Screen + audio recorded for post-session analysis

Why think-aloud?

- Surfaces **why** a user hesitates, not just **that** they did
- Captures field comprehension, label ambiguity, mental model gaps
- Appropriate for small samples where qualitative signal beats statistics

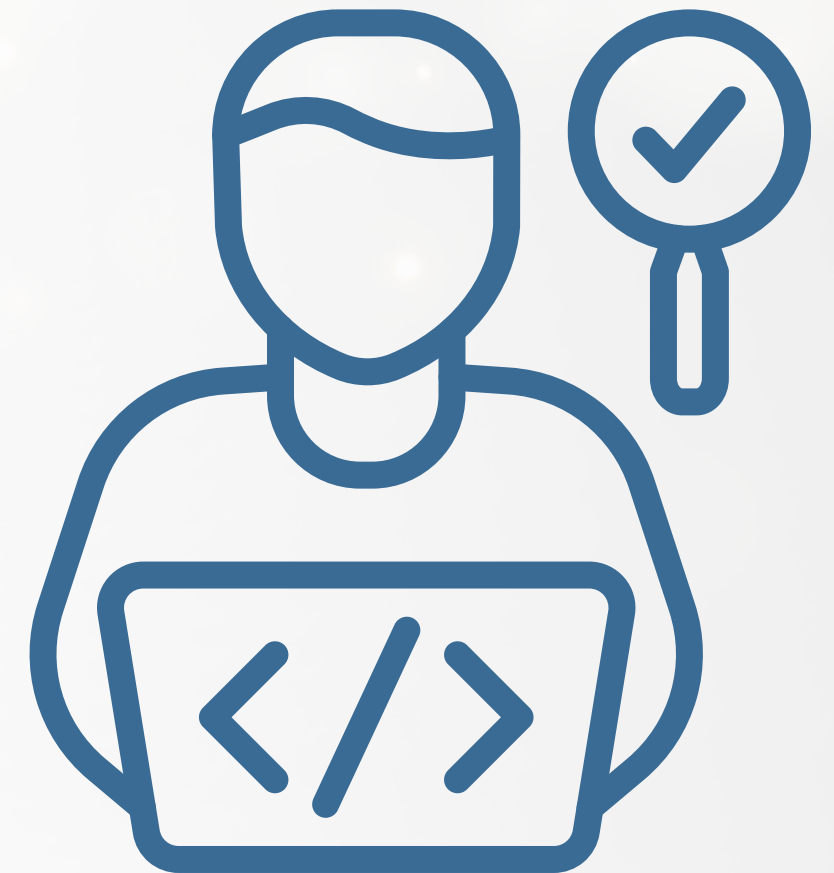

PARTICIPANTS & SETUP

Participants

- 2 testers
- Administrative-software users
- No prior exposure to prototype

Instrumentation

- Screen + audio recording · facilitator observation log
- Prototype pre-loaded with sample events, categories, and a clonable past edition

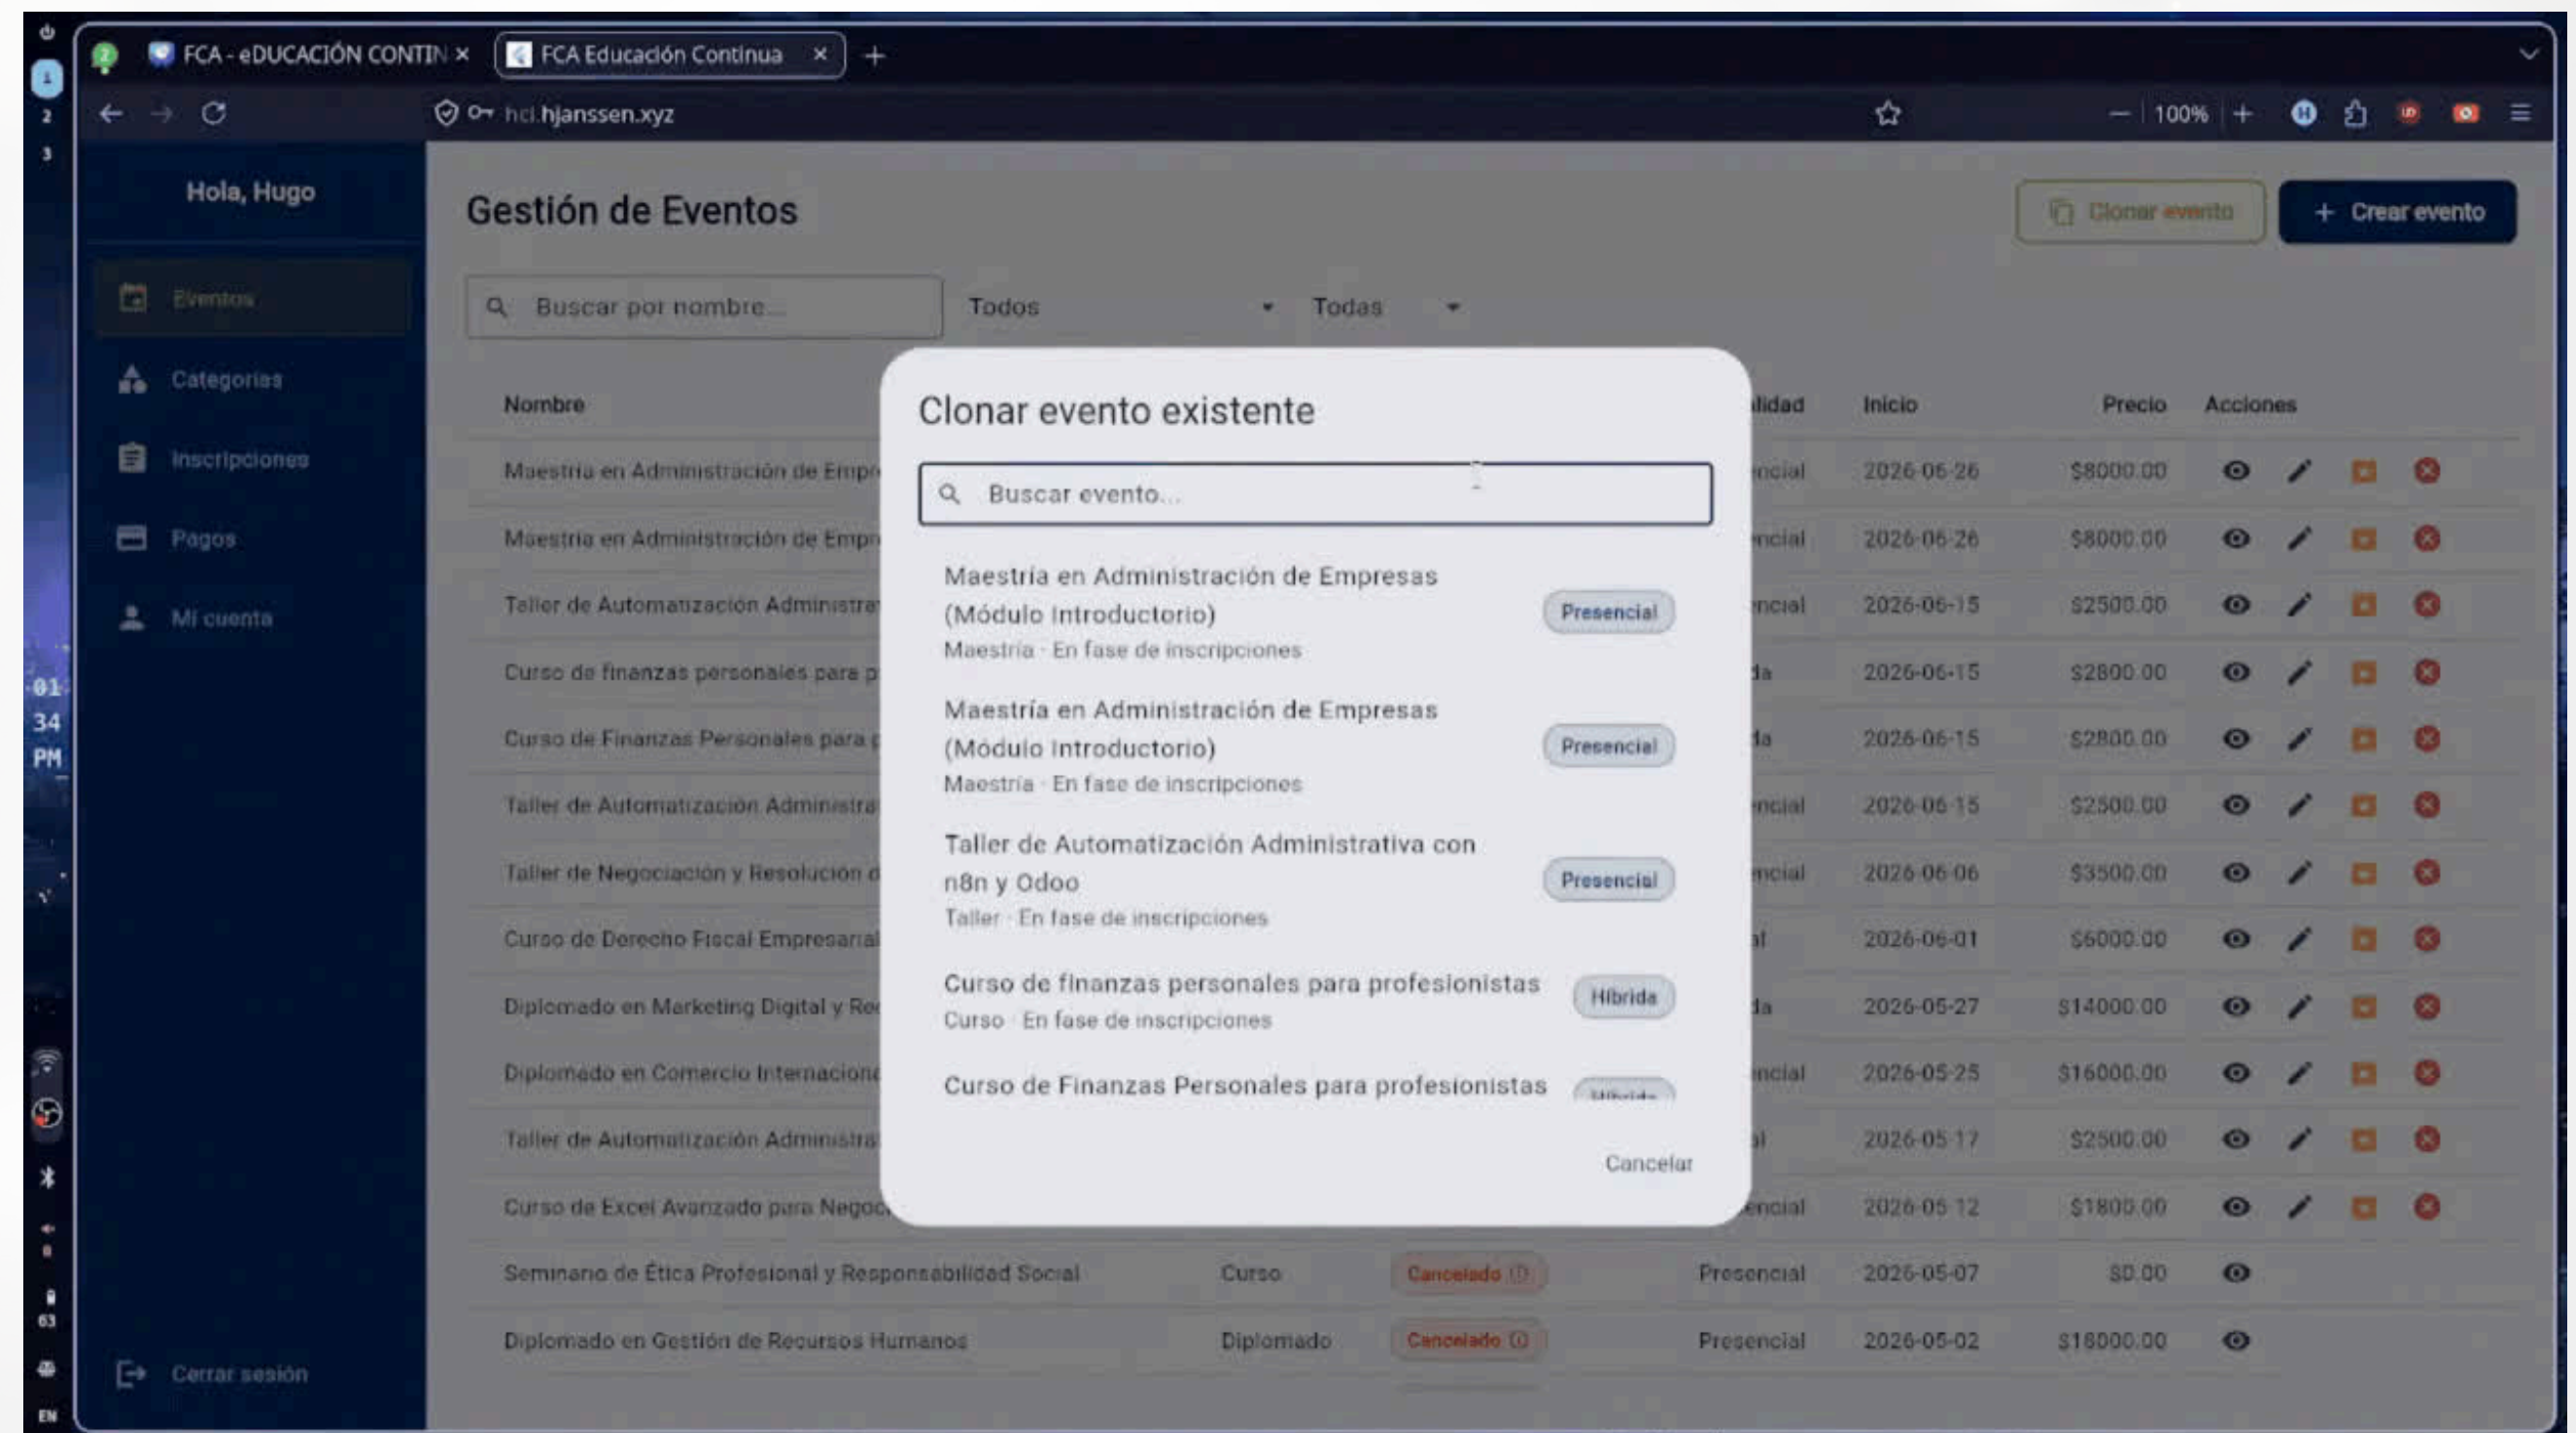

TEST SCENARIOS OVERVIEW

#	Scenario	Primary NFR	Also exercises
A	Clone & adapt an existing event	NFR-1 (Correctly pre-filled fields)	NFR-6 (User Error Protection), NFR-4 (Real-time search performance)
B	Create a new event from scratch	NFR-5 (User Error Protection)	NFR-6 (Real-time Validation), NFR-7 (Consistency in operability)
C	CRUD on categories	NFR-7 (Consistency in operability)	NFR-5 (User Error Protection)

SCENARIO A

CLONE & ADAPT EVENT

Tasks: Find previous edition → Clone → Update start date + instructor → Save

SCENARIO B

CREATE NEW EVENT FROM SCRATCH

Tasks: Navigate to create section → Capture all 15 fields → Save

The screenshot shows a web browser window with the URL `hcl.hjanssen.xyz`. The page title is "FCA - eEDUCACIÓN CONTINUA". The user is logged in as "Hugo". The left sidebar contains the following menu items: "Eventos", "Categorías", "Inscripciones", "Pagos", and "Mi cuenta". The main content area is titled "Crear evento" and contains the following fields and sections:

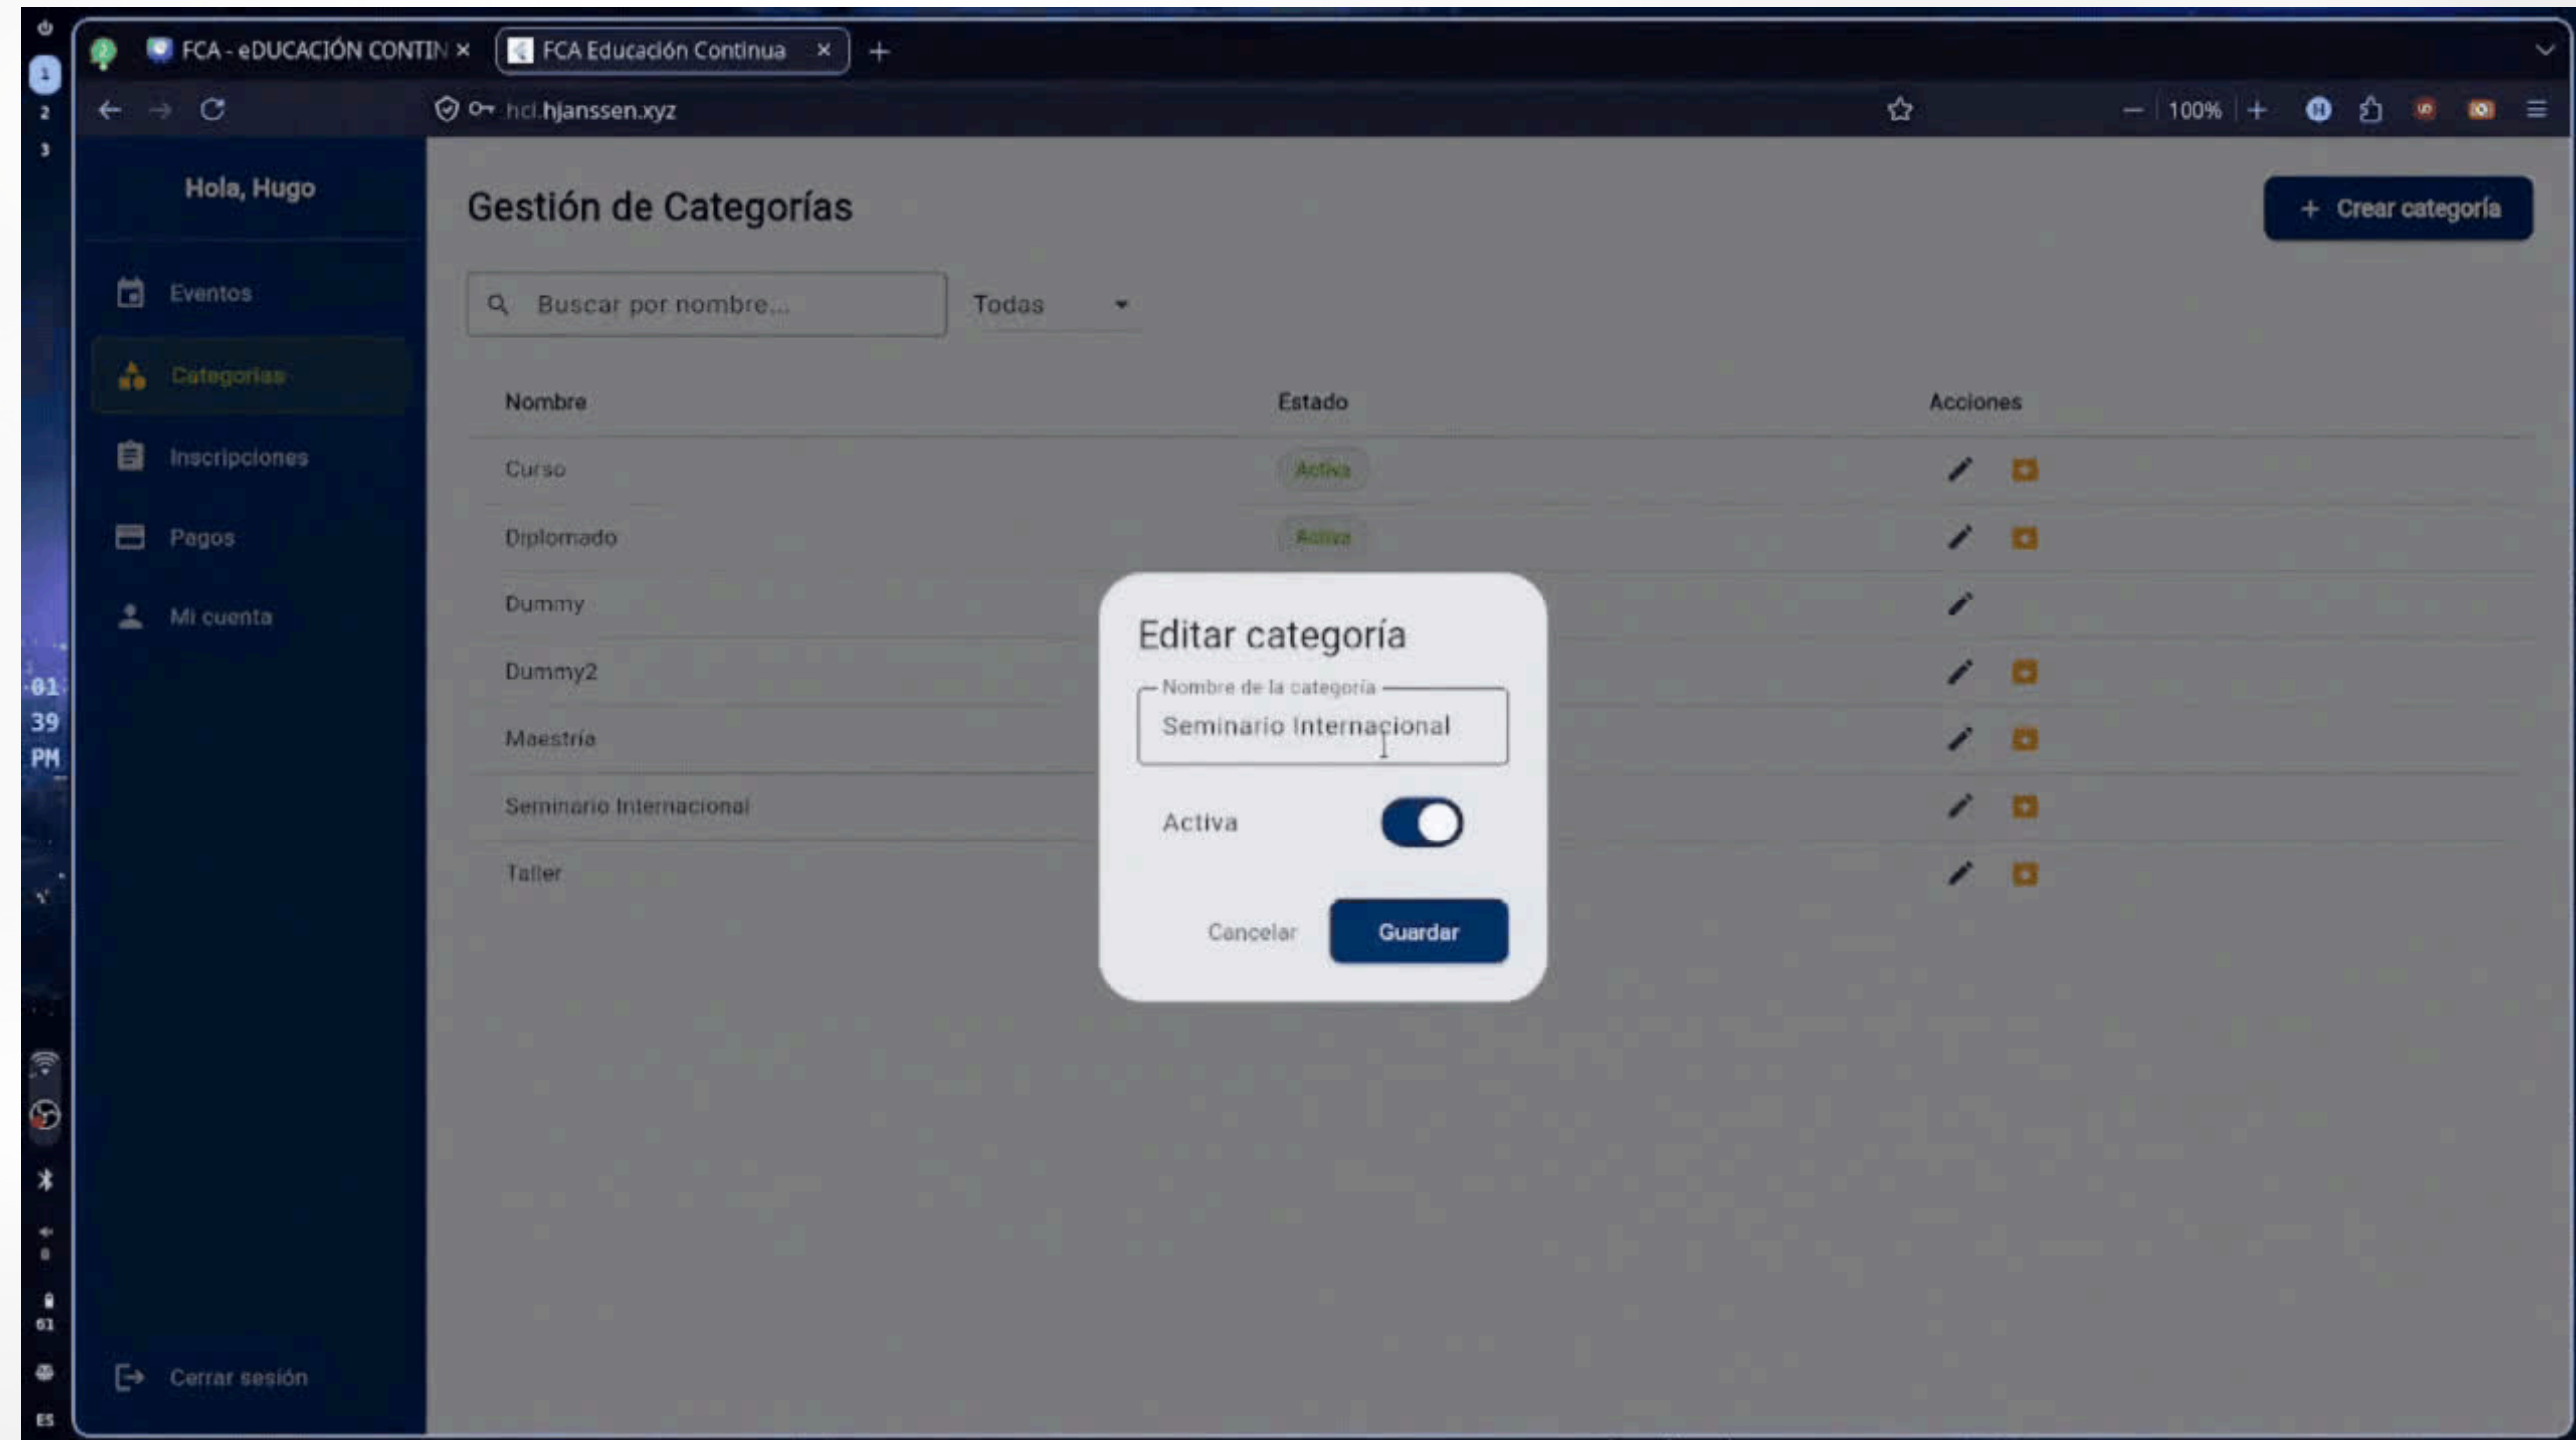

- Nombre del evento:** A text input field with the value "c".
- Categoría:** A dropdown menu.
- Descripción:** A large text area.
- Fecha de inicio:** A date picker with the placeholder "Seleccionar fecha".
- Fecha de fin:** A date picker with the placeholder "Seleccionar fecha".
- Duración (hrs):** A text input field.
- Horario semanal:** A section with a "Modo" dropdown set to "Presencial" and a "Aula / Ubicación" text input field.
- Capacidad máxima:** A text input field.
- Mínimo inscripción:** A text input field.
- Precio (\$):** A text input field.
- Puntos EPC:** A checkbox.
- Por contrato:** A checkbox.
- Requisitos de acreditación:** A large text area.
- Profesores:** A section with a "Agregar profesor" button.

At the bottom right, there are two buttons: "Cancelar" and "Guardar".

SCENARIO C

CRUD ON CATEGORIES

Tasks: Create a new event category → Edit the new event category → Archive the new event category → Find the archived event category

WHAT WE MEASURED

Metric	Scenario	Threshold
Clone event deviations	A	≤ 2
Create-from-scratch event deviations	B	≤ 2
Field-entry errors	B	descriptive
CRUD success rate	C	$\geq 85\%$
Navigational wrong turns	All	descriptive
Think-aloud confusion/confidence	All	qualitative

RESULT

CLONE TASK DEVIATIONS

Requirement validated: NFR-1 (Operability)
Threshold: ≤ 2 deviations
Scenario: A

Participant	Time	# wrong turns	Pass / Fail
P1	7:25+	9	Fail
P2	5:14	3	Fail

Observations:

- Fill-in information provided by the system was understood as such.
- Event cloning was expected to be found in event details page and not in the dashboard's header.
- There was confusion between Editing and Cloning functionality.
- Discrepancies between teacher hours and course hours weren't accounted by the system.

RESULT

CREATE-FROM-SCRATCH DEVIATIONS

Requirement validated: NFR-1 (Operability)

Threshold: ≤ 2 deviations

Scenario: B

Participant	Time	# wrong turns	Pass / Fail
P1	15:10	2	Fail
P2	8:51	1	Pass

Observations:

- Adding schedule and teacher details were not very visible or intuitive to use.
- EPC Score and Contract details lacked cohesion to the rest of the form.
- Scheduling could be made less time-taking by adding repeating time slots functionality.

RESULT

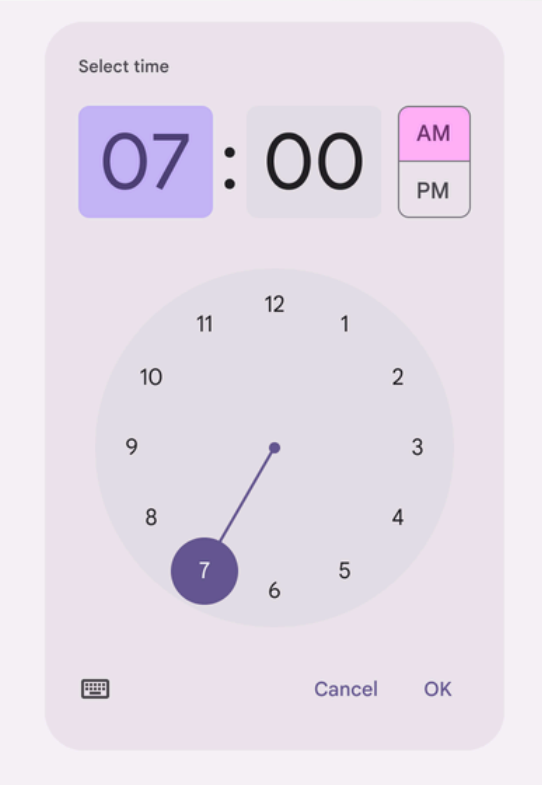

FIELD ENTRY ERRORS

Requirement validated: NFR-7 (Operability)
Scenario: B

Participant	# of Errors
P1	3
P2	1

Observations:

- Prices should be formatted (\$1,000.00 MXN) in both the input form and the displayed price.
- Time selector field (TimePicker) helped to format time input reducing user entry errors but increasing the learning curve for some.
- Info like scheduling was introduced in unrelated input forms.

RESULT

CATEGORY CRUD SUCCESS RATE

Requirement validated: NFR-7 (Operability)
Scenario: C
Threshold: ≥ 85% sub-tasks successful

Participant	C1 Create	C2 Rename	C3 Archive	Success
P1	✓	✓	✓	Pass
P2	✓	✓	✓	Pass
Aggregate				6/6

Observations:

- Lack of system feedback made users confused whether changes were made or discarded.
- User interaction with filtering caused categories to not appear, making the idea of no changes being made or information being removed unintentionally.

RESULT

NAVIGATIONAL WRONG TURNS & ERRORS

Requirement validated: NFR-5 (User Error Protection), NFR-6 (User Error Protection), NFR-7 (Operability)

Scenario: A, B and C

Participant	A	B	C	Notable error / message
P1	9	2	1	Cloning button was not found.
P2	3	2	2	Took a while to find the clone button.

Observations:

- Layout (specifically in scenario B) was inconsistent between some screens, causing even more confusion.
- Users tended to rely in search and filter tools when information was not clear or missing.

RESULT

THINK-ALOUD CONFUSION

Requirement validated: NFR-7 (Operability)

Scenario: All

Description: The number of times the tester expresses confusion

Participant	# of times	Notable reason
P1	7	Some instructions from the testing plan weren't fully understood.
P2	3	Took a while to understand the flow for adding additional weekly schedules.

Observations:

- Missing information in the Usability Testing Plan caused some details to be skipped during testing.
- The most common place to be stuck was while making new events, mainly because of its layout.
- The term “archiving” means “to delete temporarily” for us, but for the users it usually means “to save/store”. This caused doubt on what the function is meant to do.

RESULT

KEY FINDINGS

What worked

- Color choice and appearance was aesthetically pleasing, felt modern and helped to guide the user.
- Sidebar layout worked as intended.
- Only one functional error was found during this testing.

Friction points

- Filtering options should be redesigned to enable multiple filter usage.
- Users felt slightly disorientated at the home screen because of the amount of information displayed at once.

Surprises from the think-aloud

- “Archive” is understood differently by administrative users, as they consider archiving to be similar to “saving” or “storing”.
- A better term for “price” would be “cost”, as it is more common in this academic context.
- Users proposed choosing the type of event desired before being shown the full list.

THANK YOU
